ATEX SOLUTIONS
FROM AERZEN

Positive Displacement Blowers, Rotary Lobe Compressors and Screw Compressors, built in accordance with Directive 2014/34/EU
Directive 2014/34/EU finds increasing application in chemical and process technology industries. The law entered effect on December 12, 1996; see also the eleventh regulation of the product safety law (explosion protection regulation). Beyond supporting the crucial priority of safety and consumer protection, standardising requirements across Europe will promote the free exchange of goods within the EU. It is increasingly important that manufacturers make the following clear to their customers prior to selecting the equipment: explosion protection must be planned for in advance.

Two Directives – A Single EU-wide Approach to Protection.

- ATEX Product Directive 2014/34/EU (ATEX 114)
- ATEX Worker Protection Directive 1999/92/EC (ATEX 137)

The ATEX Product Directive 2014/34/EU regulates the commercialisation of products intended for use in areas at risk of explosion. The primary goal of the product directive is to protect persons who work in explosion-prone areas, or in areas that could be affected by explosions. Since the directive’s entering effect at the end of 1996, only those devices, components and protective systems that comply with ATEX Product Directive 94/9/EC, or respectively its revised version 2014/34/EU, may be commercialised for use in areas at risk of explosion.

By comparison, the ATEX Worker Protection Directive requires that employers (plant management) fulfill or comply with certain requirements pertaining to the health protection and safety of employees who are exposed to potentially explosive atmospheres. Plant managers are required to include an explosion protection plan as part of their risk assessment and to divide areas with potentially explosive atmospheres into zones.
ATEX is a contraction from the French “ATmosphère EXplosible” and is used for the European directive covering equipment and protective systems used in areas at risk of explosion.

Equipment Categories 1 to 3.

<table>
<thead>
<tr>
<th>Equipment category according to EC directive</th>
<th>Category 1</th>
<th>Category 2</th>
<th>Category 3</th>
</tr>
</thead>
<tbody>
<tr>
<td>Hazard</td>
<td>Constant, frequent, or over longer periods (&gt; 1000 h per year)</td>
<td>Occasional, random (10 to 1000 h per year)</td>
<td>Infrequent and short duration (&lt; 10 h per year)</td>
</tr>
<tr>
<td>Safety level</td>
<td>Very high</td>

INDUSTRIES AND TYPICAL APPLICATIONS.

Environmental technology
• Biogas compression
• Natural gas compression
• Gas feed

Food and plastics industries
• Pneumatic conveying
• Silo loading and unloading

Chemical and pharmaceutical industries
• Gas conveying
• Degasification

Refineries

Power plants
MADE BY AERZEN. EFFICIENCY AND MAXIMUM SAFETY IN EVERY ZONE.

For years, compressors and blower packages “made by AERZEN” have been regularly used in highly critical areas. The know-how and experience that we have gathered over the decades regarding practically every type of application are reflected especially in the processes that fall under the ATEX directive. AERZEN offers its customers a range of solutions for ATEX zones that is unique in its scope and effectiveness: A good starting point when it comes to meeting ever more stringent requirements safely and economically.

Your Requirements:
Sound advice is the key to success. This is especially true when planning for applications in Ex-areas. This is why we place great emphasis on careful preparation. Our engineers will discuss the details of your project with you well in advance and assemble all ATEX-relevant information (further details on page 3): That is the prerequisite for meeting ATEX zone requirements when designing equipment suited to a set application.

Remarkable Diversity: the ATEX portfolio from AERZEN.

Made to Order:
Complete ATEX Solutions from a Single Source.
With AERZEN products, customers benefit from a comprehensive solution to all their ATEX-compliant equipment needs. Our ATEX specialists will design the proper assembly for you – including all associated features (see below). The design includes all necessary documentation and accessories to meet the conditions of ATEX Product Directive 2014/34/EU. Moreover, our engineers will review and, if necessary, implement further customer requests pertaining to equipment design in view of complying with Directive 2014/34/EU (ATEX). In addition to engineering experience based on decades of work with facilities of all sizes, we offer our customers a number of other significant advantages:

- Comprehensive advice from the AERZEN team of experts
- Equipment conforming to Directive 2014/34/EU
- Complete documentation
- Adherence to legal requirements
- Complete solutions from a single source

ATEX Solutions from AERZEN: Always an Idea ahead.
Regardless of whether it is to be used for positive or negative pressure applications, high-performance AERZEN equipment is the right solution for your ATEX zone: TÜV tested, of course. According to product group and zone type, our technologies have different designs. Features may include:

- Zone separation filter
- Special documentation
- Use of specialised materials for components in contact with the medium
- Ex-instrumentation
- Vibration monitoring
- Spark arrester
- Special motors designed for a specific zone

Example: vacuum pneumatic conveying.
AERZEN zone separation filter:
Explosion Protection in Pneumatic Bulk Material Conveyance.

Flammable or explosive mixtures can occur in the pneumatic conveyance of combustible or flammable bulk materials. For this reason, system components may have to be designated for different zones to ensure all necessary protective standards are met (see illustration).

AERZEN can provide ATEX designs for all system components to ensure explosion protection. According to the ATEX Directive, Zone 21 must provide explosion protection measures even in case of malfunction. That is why the AERZEN safety concept always takes exceptional malfunctions into account.

Depending on product and plant configuration, bulk materials are transported either by means of positive pressure or vacuum pneumatic conveying. During vacuum operation, it is important to ensure that no flammable dust-air mixtures enter the blower due to functional problems in the separator filter (for example filter rupture). To this end, an additional filter element (sentinel filter) is usually added during plant construction. This often means additional time and expense for design, assembly, and installation, which is why AERZEN developed a TÜV-tested filter element (sentinel filter or zone separation filter) integrated into the intake silencer. The filter is monitored by measuring its pressure drop, offering our customers a decisive advantage: they no longer need to figure a sentinel or zone separation filter into their scope of supply.

One problem that is often overlooked in pneumatic conveying systems is that inadequate maintenance can result in the blower producing sparks that, when blown into the conveying pipe (positive pressure conveying), can ignite dust-air mixtures. Organic dust-air mixtures can ignite at temperatures between 200° C and 500° C. During malfunction, sparks can reach temperatures of up to 1,000° C, making serious damage a possibility. A spark arrester integrated into the pressure-side silencer/base support prevents sparks caused by malfunction from reaching the hazardous zone. Spark arresters are no longer necessary – another decisive advantage for our customers. Retroactive certification of the spark arresters for previously delivered units can be provided under certain conditions.

Example: schematic of a positive pressure conveying system.

AERZEN spark arrester:

Advantages of an integrated AERZEN solution:

- Customer savings
- Maintenance-free (spark arrester)
- Minimal pressure loss
- Energy-efficient
- Compact
- Discharge silencers free of absorption material
- 100% safe
The following components can be specifically configured for ATEX zones:

- Drive motor
- Belt drive
- Instrumentation, including pressure differential, vibration, and temperature monitoring
- Housing materials
- Suction-side components (filter silencer, sentinel or zone-separation filter)

- Additional labelling, operation manuals and declaration of conformity in accordance with Directive 2014/34/EU
- Discharge silencer as spark arrester
- Additional component used on compressors: coupling
AERZEN. Compression - the key to our success.

AERZEN was founded in 1864 as Aerzener Maschinenfabrik. In 1868, we built Europe’s first positive displacement blower. The first Turbo blowers followed in 1911, the first screw compressors in 1943, and in 2010 the world’s first rotary lobe compressor package. Innovations “made by AERZEN” keep driving forward the development of compressor technology. Today, AERZEN is among the world’s longest established and most significant manufacturers of positive displacement blowers, rotary lobe compressors, screw compressors and turbo blowers. AERZEN is among the undisputed market leaders in many areas of application.

At our 50 subsidiaries around the world, over 2,500 experienced employees are working hard to shape the future of compression technology. Their technological expertise, our international network of experts, and the constant feedback we get from our customers provide the basis for our success. AERZEN products and services set the standard in terms of reliability, stability of value and efficiency. Go ahead - challenge us!
